## THE MONTH AT A GLANCE

	DEC
S&P 500	4.53%
MSCI EAFE	5.31%
MSCI Emerging Markets	3.91%
Bloomberg US Aggregate	3.83%

All returns are total returns as of the month end of the report unless otherwise noted.

Indices are unmanaged and cannot be invested into directly. The returns do not reflect fees, sales charges, or expenses. The results don't reflect any particular investment. Past performance is not indicative of future results.

## MARKET RALLY CONTINUES TO CLOSE OUT THE YEAR, S&P 500 GAINS OVER 26%

The rally across capital markets continued largely uninterrupted in December, despite a slight head fake on December 20<sup>th</sup>. Investors may have feared another bout of volatility heading into fall after the S&P 500 had lost just over 10% from the summer high, only for the index to rally over 15% from October 27<sup>th</sup> through the end of the year and coming within striking distance of new all-time highs. The S&P 500 ended up gaining 4.53% in December and 26.26% for 2023 on a total return basis. For the month, the MSCI EAFE outperformed while emerging markets underperformed the S&P 500.

Bonds also continued their rally and gained over 9% from their mid-October lows, ending the year up 5.53%. One of the big bond stories of 2023 is the changing consensus around future Federal Reserve actions. As those expectations have shifted, yields on government bonds have come down as well, pushing up bond prices and giving bond investors some relief from recent pain. Heading into the year the thought was a recession was nearly inevitable in 2023 leading investors to think the Fed's policy may change, which turned into a "higher-for-longer" narrative that coincided with the volatility across both bonds and stocks in the late summer and early fall. Currently, the growing consensus is the Fed will pivot in early-to-mid 2024 and begin cutting rates, which has, at least in part, fueled the rally over the last few months.

While risks still remain in the economy, the consumer continues to drive the economy forward, supported by a still hot, yet slowly cooling, jobs market and higher income, even after adjusting for inflation. While inflation has come down substantially over the year, it remains above the Fed's target and the third quarter of the year saw some of the improvement reverse. Changing Fed expectations remain the focus of investors heading into the new year and could become a source of volatility if they were to shift again.

## MARKET HIGHLIGHTS

- December's performance was a welcomed end to the year as it continued the prior month's rally. As for December itself, the clear winner was Small Cap as it greatly outperformed both Midcap and Large Cap, returning 12.23%, compared to 7.71% and 4.53%, respectively.
- The MSCI ACWI and EAFE both did well, performing better than the S&P 500, while emerging markets alone slightly underperformed, though it still gained almost 4%.
- Bonds also benefited from the year end rally where aggregate bonds continued to climb from mid-October lows and surpassed its 2023 high from April.
- Real estate was not left out and was able to return nearly 9%, but the same cannot be said for commodities, which fell an additional 3.10%.

# Stock and Bond 2023 Style Boxes

## WHAT DOES IT MEAN?

- With the so-called Magnificent 7 stocks (Amazon, Apple, Alphabet, Meta, Microsoft, Nvidia, Tesla) driving the majority of equity market gains for the year, it's no surprise that large cap growth significantly outperformed in 2023, with the Russell 1000 Growth Index gaining nearly 43% for the year.
- On the fixed income side of things, long duration has won out, though the end of year rally was the driver of the outperformance and long duration had been underperforming throughout most of the year.

## LARGE CAP GROWTH DOMINATES EQUITY LEAGUE TABLES IN 2023

2023 Total Returns, Stocks Represented by Russell Indices, Bonds by Bloomberg Indices

		Growth	Blend	Value
Stocks	Large	42.79%	26.58%	11.46%
	Mid	26.09%	17.38%	12.83%
	Small	19.18%	17.43%	15.12%
		Short	Intermediate	Long
Bonds	Aggregate	4.78%	5.54%	6.62%
	Treasury	5.03%	4.08%	3.50%
	Corporate	5.70%	8.60%	11.27%

# Bond's Wild Ride in the Second Half of '23

## WHAT DOES IT MEAN?

- Changing Fed expectations caused the yield curve to shift dramatically over the second half of the year. In the Fall, we saw aggregate bonds quickly sell off, causing many investors to fear what another negative year for bonds may mean for their portfolios.
- However, the rally from the end of October onward fueled a sharp rally in bonds and yields came down and expectations for the Fed shifting to a more dovish tone.
- As we head into 2024 there seems to be a growing consensus for the path for the Fed, though that may mean the risk for volatility is greater if those expectations shift again.

# Market Expectations for Fed Policy

## WHAT DOES IT MEAN?

- Based on press coverage it may seem obvious that investor expectations around Fed policy have changed substantially over the year. Visualizing those expectations and how they have coincided with pivot points in the S&P 500 shows
- Over the course of the second half of the year, investor expectations increased nearly a percentage point before falling back to slightly below where they were at the end of June.

# Recession Monitor

## WHAT DOES IT MEAN?

- Payrolls came in over expectations where the outperformance was driven by gains in government and healthcare, relative to the consensus.
- Real personal incomes increased by 0.6%, which is double what real personal consumption increased by, at 0.3%. The three months of accelerating gains in inflation-adjusted income are supportive of the latest consumption and retail sales support.
- Looking ahead into 2024 economists are expecting consumer spending to decelerated (but stay positive) across the first half of the year and for industrial production to stay relatively tepid.

## KEY COMPONENTS THE NBER EVALUATES

Monthly changes, December 2022 to November 2023

Note: Employment Survey is the monthly change in the size of the civilian labor force from the Bureau of Labor Statistics Current Population Survey.

# Ecosystem

# Trend Level Element

## TRADE RATIONALE

The Trend Element has a positive view of equity markets. In December, the S&P 500 continued the significant upward rally that began toward the end of October. The rally has, at least partially, been fueled by investors anticipating the Fed to pivot away from its hawkish stance and to potentially cut rates multiple times in 2024. The growing consensus around what the Fed will do will likely shape next year and potentially roil markets if expectations change.

## DAILY ELEMENT DATA

Source: Helios Quantitative Research, Bloomberg

No theoretical approach can take into account all of the factors in the markets in general and the impact of decisions that might have been made during the actual operation of an index. Actual returns may differ from, and be lower than, back-tested returns. An index is a hypothetical portfolio of securities representing a particular strategy, market, or a market segment used as indicator for that particular strategy, market, or market segment. Indexes cannot be invested in directly.

Helios Quantitative Research LLC ("Helios") is associated with, and under the supervision of, Clear Creek Financial Management, LLC ("Clear Creek"), a Registered Investment Adviser. No advice may be rendered by Clear Creek or its representatives unless a client service agreement is in place.

# Volatility Level Element

## TRADE RATIONALE

The Volatility Element has a positive view of equity markets. Prior risks that were priced into corporate balance sheets, as well as implied equity risk, have come down substantially since the end of October, coinciding with the equity market rally and improving investor moods. Driven by expectations that the Fed will cut rates in late Q1 or early Q2 of 2024, a risk reversal could be seen if inflation data rebounds and stalls rate cut efforts.

# Economic Level Element

## TRADE RATIONALE

The Economic Element maintains a slightly positive view of equity markets. The view has been steady since the end of October, though the underlying economic data did see a slight slip in global output. The Element sees risks across the economic landscape, particularly in areas such as production, sales, and services conditions. Categories such as sentiment, employment, and financial system stress are helping to offset these negative aspects and inform the Element's overall view.

# Contrarian Level Element

## TRADE RATIONALE

The Contrarian Element has a neutral view of equity markets. As the equity market rallied, valuations have started to creep up as well, though remain solidly in a normal range based on recent history. If trends were to continue, or fourth quarter earnings come under unexpected pressure, the market may move into 'expensive' territory causing the element to have a negative view of the equity market.
