

Market Overview

Market Overview

1 THE MONTH AT A GLANCE

	MAR
S&P 500	3.67%
MSCI EAFE	2.48%
MSCI Emerging Markets	3.03%
Bloomberg US Aggregate	2.54%

All returns are total returns as of the month end of the report unless otherwise noted.

Indices are unmanaged and cannot be invested into directly. The returns do not reflect fees, sales charges, or expenses. The results don't reflect any particular investment. Past performance is not indicative of future results.

SVB HAD A TEMPORARY IMPACT ON THE S&P 500, LASTING IMPACT ON RATES

Broad equity markets moved up in March with the S&P 500 gaining 3.67%, MSCI EAFE up 2.48%, and MSCI Emerging Markets up 3.03%. The second half of the month saw markets rally and recover from the pullback they experienced following the collapse of Silicon Valley Bank and the wider spread concerns over the banking system's stability. In early March, from the 6th to the 13th, the S&P 500 had lost 4.76% from concerns over the crisis, but the 13th would mark the lowest point for the month, and the S&P 500 would go on to rally over 6.5% from the March lows.

However, not every part of the equity market recovered so quickly. The Russell Midcap and Russell 2000 indices remained in the red throughout the rest of the month, with the Russell Midcap losing 1.53% and the Russell 2000 losing 4.78% in March. Not surprisingly, financials were the worst performing sector within the S&P 500 and lost 9.55%. Regional banks continue to face pressure, and the S&P Regional Banks Select Industry Index lost 28.16% in March.

The crisis changed the market's expectations over what the Fed may do over the rest of the year as well. Overall, the US yield curve shifted lower, basically reversing the move that it had made in February as the market moved to expect the Fed to begin cutting rates as soon as this summer. Overall, the expectations around Fed policy continue to shift month to month, though it did so fairly dramatically over the course of March. The lower shift helped bond markets, with the Bloomberg US Aggregate gaining 2.54% in March, putting the year-to-date gain at 2.96%.

Market Overview

Equity Markets	MTD	YTD	1 Year	3 Year	5 Year	10 Year

Bloomberg Commodity	-0.61%	-6.47%	-15.19%	19.48%	3.82%	-2.61%

MARKET HIGHLIGHTS

- Banking fears that plagued the first half of the month began to recede in the latter half, with the S&P 500 gaining 3.67% in March. The markets rallied from the lows following the collapse of SVB, which had pushed the S&P 500 down over 4.7%.
- While overall banking fears may have settled down a bit, both financials and regional banks missed the recovery, where the iShares US Regional Banks ETF lost 29.62% in March. This contributed to the wide discrepancy seen between US large caps vs. mid and small caps.
- The crisis also had a more lasting impact on the US yield curve, as it shifted back down based on expectations of what the Fed may do for the rest of the year turned more dovish. Effectively reversing February's upward shift in the yield curve.

* Through March 30, 2023

Credit Spreads Compress Over the Month

WHAT DOES IT MEAN?

- Despite the concerns that rattled most capital markets in March, how investors priced high yield bonds was relatively stable across the crisis.
- Credit spreads, the difference between what investors demand for holding higher risk corporate debt vs. US Treasuries, declined over the course of the month, helped by a precipitous decline over the last few days of the month.

Expectations on Fed Policy

WHAT DOES IT MEAN?

- Expectations around future Fed policy shifted dramatically following the collapse of Silicon Valley Bank. The Fed futures market is now expecting a 50/50 chance of the Fed either maintaining rates or hiking one more time over the next two meetings.
- If the expectations were to hold true, the latter half of the year would see fairly consistent rate cuts.

EXPECTATIONS QUICKLY SHIFTED DOWNWARDS

Expectations on Fed Policy

WHAT DOES IT MEAN?

- Looking at it another way, the implied Fed funds rate takes into account the various probabilities to arrive at an “expected” Fed funds rate.
- In the chart on the right, the shift in expectations immediately before the collapse of Silicon Valley Bank compared to the implied rates at the end of the month.
- Notably, the implied rates at the end of March signals that market believes the Fed is already at their peak rate levels and expects them to start reducing rates within the next two meetings.

EXPECTATIONS QUICKLY SHIFTED DOWNWARDS

Implied Fed rate, derived from Fed futures market

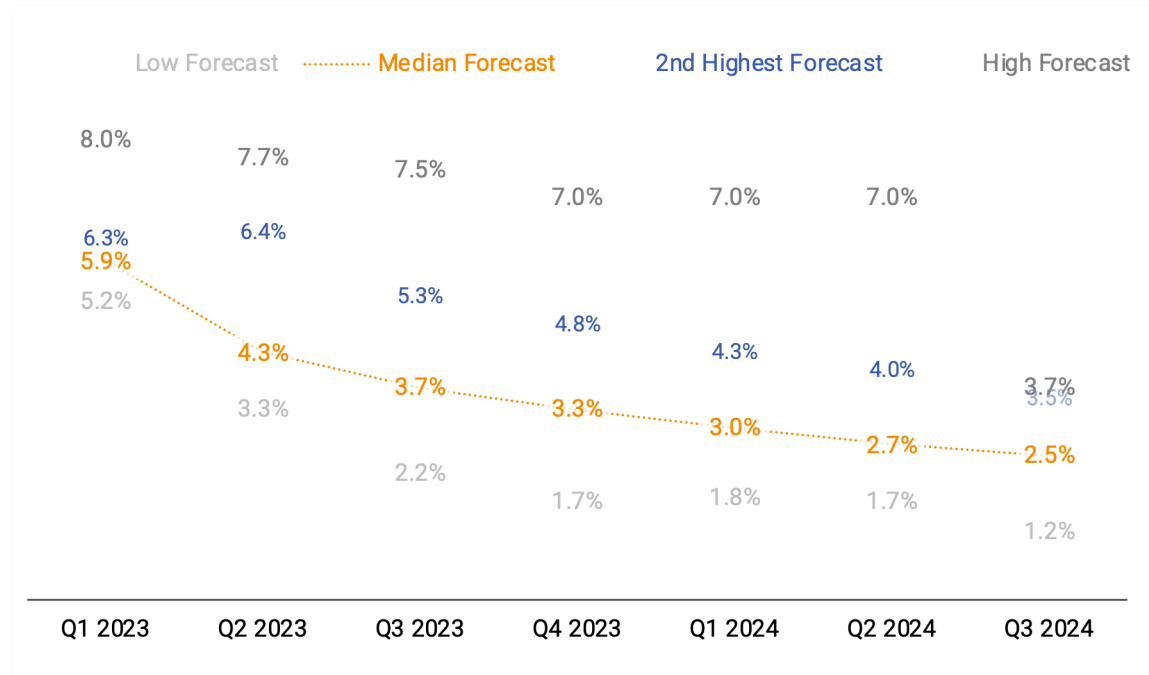

Keeping An Eye On Inflation Expectations

WHAT DOES IT MEAN?

- Inflation continues to be a hot topic and is likely on the mind of many investors.
- Compared to forecasts from last month, median estimates over the next few quarters increased slightly while the low forecasts across the first few quarters of 2024 dipped.
- The high forecast continues to be an outlier from one economist with the second highest forecast substantially lower through Q2 2024.
- The next CPI report will be released on April 12th, with the latest Bloomberg survey of economists suggesting a 5.2% annual price increase.

Recession Monitor

WHAT DOES IT MEAN?

- Labor continues to be the strong spot across the major data points that the NBER evaluates to determine the health of the economy.
- The last few months have been noisy across a few of the data points, such as Retail Sales, Industrial Production, and Personal Consumption Expenditures (PCE).
- Personal income has been trending downwards since the middle of last year and was flat in February. If incomes, after adjusting for inflation, turn negative consistently, that would put additional pressure on the overall economy.

KEY COMPONENTS THE NBER EVALUATES

Monthly changes, February 2021 to February 2023

Note: Employment Survey is the monthly change in the size of the civilian labor force from the Bureau of Labor Statistics Current Population Survey.

VIX SPIKES THEN REVERTS
VIX Index, 12/30/22 to 03/31/23

WHAT'S IMPORTANT

- Regional banks continue to face pressure over their stability and an index of regional banks lost over 28% for the month, completely missing the rally seen in the S&P 500.
- The US yield curve shifted lower in March, effectively ending the month where it was at the end of January and reversing the shift upward in February.
- Inflation improved in February, after stalling a bit in January, with headline inflation falling to 6.0% from 6.4%. Nevertheless, core inflation barely budged, improving to 5.5%, from 5.6%. Services continues to be an area of concern with prices rising 4.15%, though goods inflation continues to come down, falling to 0.22%.
- Short-term volatility expectations spiked in the middle of the month, but improved to end the month below where it began.

Ecosystem

Trend Level Element

TRADE RATIONALE

The Trend element remains positive, despite a first half of March that was marked by a banking crisis and a back half that saw the S&P 500 rally over 6% from the March lows. Previous expectations around the Federal Reserve maintaining rates “higher for longer” quickly dissipated following the collapse of Silicon Valley Bank. Expectations are now for the Federal Reserve to begin cutting rates later this year amid economic concerns that continue to be a risk factor in markets.

Volatility Level Element

TRADE RATIONALE

The Volatility element returned to a positive view of equities as the fallout from the banking crisis appeared to be contained. Credit spread risk notably improved in the back half of March, pushing relative implied volatility and credit spread data back to attractive levels. Outside of banking crises, volatility expectations continue to move along with changing inflation outlooks that coincide with shifting expectations around Fed policy.

Economic Level Element

TRADE RATIONALE

The Economic element slightly improved in March, though overall continues to see mixed data across the economy. The improving trend comes as some of the low-scoring categories see improvement, such as consumer sentiment and overall economic conditions, despite neither being particularly positive. Jobs and employment continue to be the bright spot across the economy, despite slight dips in production and global output.

Contrarian Level Element

TRADE RATIONALE

The Contrarian element continues to view the market as fairly valued and remains in a neutral position. Equity market valuations continue to hover toward the middle of recent history. The fallout from the banking crisis may be receding, but the shift to more dovish expectations around future Federal Reserve policy has held so far, which may help companies, at the margin at least, in upcoming earnings seasons.
